

We have added a new twist to the serpentine system with the introduction of our modular systems. The crank base is bolted to the damper and now you can choose from three different diameters of crank pulleys to vary your water pump and steering pump speed. The smaller the crank pulley, the less horsepower it will

take to operate the water pump and accessories. Alignment on these pulleys is kept straight by using a pin drive system. You can stack several crank pulleys to operate different accessories. The kit includes a 1.25" hex on the retaining and cap to rotate the engine manually when needed.

**KRC 40250 Head Mount
KRC 40251 Block Mount**

Modular serpentine pulley kit that includes crank adapter, 3.5" twin groove water pump pulley, hex retaining end cap, Goodyear 6-rib belt and hardware. This kit allows you to change the crank pulley diameter to vary the speed of the water pump. Order crank drive pulleys separately, three sizes available.

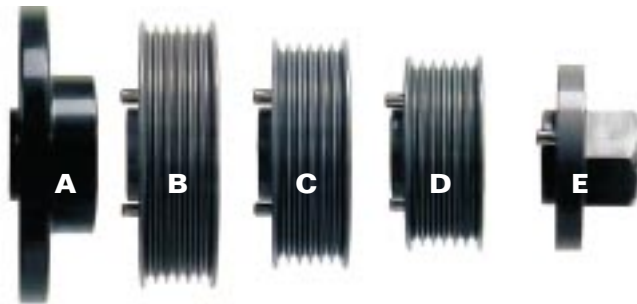

KRC 40115

.200" thick crank spacer to compensate for different in standard short cast iron Chevrolet water pump and .200" longer 3/4" shaft aluminum water pumps.

KRC 40118

Same as 40115 except 3/8" thicker for front engine plate that goes between the water pump and block.

- A - KRC 40200** • Crank base adapter
- B - KRC 40220** • 3.5" crank pulley - drives water pump 1 to 1.
- C - KRC 40215** • 3.0" crank pulley - 15% water pump reduction.
- D - KRC 40210** • 2.5" crank pulley - 29% water pump reduction
- E - KRC 40105** • 1.25" hex end cap retainer.

KRC 40105

3.5" Denso 3-groove alternator pulley.

KRC 40160

Serpentine pulley for a Saginaw™ steering pump. Allows racers to use KRC serpentine kits with a Saginaw pump. Pulley has a grooved boss so you can use GM tools to install or remove the pulley.

KRC 40155

5" fuel pump pulley. For 5/8" shaft pump. Uses 3-groove belt.
