

QUICKCABLE

Your Best Connection

BATTERY & WELDING CABLE

Use color-coded battery cable for these reasons:

- Quick & easy identification of the cable gauge is provided
- Color coding matches the cable to the connector & crimper
- The color stripe helps you measure the length of your cable

You need both red & black cable. Here's why:

The generally accepted industry practice is to use black insulated cable for negative (ground) wires & red insulated cable for positive wires. By using both black & red cable, your wiring system will be easier to install & trouble-shoot.

BATTERY CONNECTORS

Military Specification

- Low-profile design measures only 3/4" high
- Long bolt permits additional power connection
- Polarity-specific lead construction, zinc-plated steel hardware included
- Complies with Mil Spec A52425-1 / A52425-2

Marine

- Converts battery post to stud connector
- Permits quick disconnection from battery; eliminates current drain during storage
- Polarity-specific — meets U.S.C.G. regulations
- Brass or lead construction, hardware included

DESCRIPTION	MATERIAL	PART NO.
Military, clamp, negative polarity	Lead; zinc-plated steel fasteners	5349-005N
Military, clamp, positive polarity	Lead; zinc-plated steel fasteners	5350-005P

DESCRIPTION	MATERIAL	PART NO.
Marine, top post-to-3/8 stud, negative polarity	Lead; zinc-plated steel fasteners	5516-005P
Marine, top post-to-5/16 stud positive polarity	Lead; zinc-plated steel fasteners	5518-005N
