

Introducing **AERO RACE WHEELS**, the industries newest line of racing wheels. With 30 years of wheel design and wheel manufacturing experience, we know how to build it right! **AERO** not only builds the wheels, we manufacture our own rims and centers, assemble the wheels using state of the art technology and finish them with the highest quality electrodeposition or powder coatings. We offer a full line of products designed specifically for each type of racing application at affordable prices.

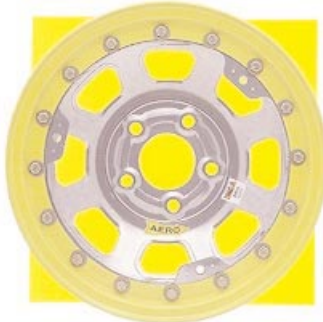

### 59 SERIES NASCAR APPROVED AERO WHEELS

The 2001 Winston Cup Champion, 2001 Craftsman Truck Champion and 2001 ARCA Champion all chose Aero's 59 Series Wheel. Champions chose CNC spun from Aero Race Wheels because of our quality control standards that produce the strongest, lowest total runout race wheel on the market. Aero Race Wheel is the originator of the 2 valve stem with one valve stem behind the window. Aero also has the only wheel on the market with the "E-Coat" Process which is heat resistant and acts as a heat shield. The "E-Coat" Process also helps prevent equalization of the tire and inner liner normally caused by paint peeling and rust.

### 58 SERIES NASCAR ROLLED FORM AERO WHEELS

The same quality control standards used in Aero 59 Series NASCAR Approved Wheels are incorporated into the production of the economically priced rolled form 58 Series wheel. The 58 Series Wheel features the largest drop center in it's class, providing the most brake caliper clearance and brake cooling capabilities available in a 15 x 10 wheel.

**COMING SOON:** 15 x 10 and 15 x 12 Bead Bump Wheels – Excellent for dirt use.

### 53 SERIES BEADLOCK AERO WHEELS

Aero's 15 x 8 Beadlock Wheel is I.M.C.A. and WISSOTA approved and is the most widely used wheel in these two associations. Aero Beadlock wheels are a true 8" or 10". We manufacture special rims for our Beadlock Wheels, avoiding runout problems caused by using a torch or plasma cutter to trim rims to size. Inner and outer beadlock rings are CNC laser cut to insure consistent quality and accuracy on every wheel. Aero's Beadlock Ring uses 16 grade 8 zinc-plated bolts and washers. Mud cover tabs are cut directly into the inner ring, eliminating the need for welding. **COMING SOON:** 15 x 12 53 Series Beadlock Wheel

### 52 SERIES I.M.C.A./WISSOTA APPROVED AERO WHEELS

The 52 Series Wheel is the most widely used 15 x 8 wheel in I.M.C.A. and WISSOTA racing. Since we manufacture all rims in-house and build our own dies, we were able to re-invent the D.O.T. safety bead hump, legally. These wheels have a safety bead hump that still has an edge on it to grip the tire and keep it on the rim. No other approved wheel will keep your tire on the rim better than ours. Aero Wheels are designed to be both strong and energy adsorbent, saving you money in the long run.

### 51 SERIES CNC SPUN FORM AERO WHEELS

The 51 Series Wheels are the finest spun form wheel available. These wheels, which are the lightest and strongest on the market, feature the largest drop center available, providing the most brake caliper clearance and brake cooling capabilities. Each Aero Wheel is manufactured under the strictest quality control standards, insuring the ultimate in quality and durability with Winston Cup technology.
